

Ante la posibilidad BAJAS TEMPERATURAS (inferiores a 0°C), se recomienda purgar las tuberías, desinstalar el grifo y almacenarlo a temperatura ambiente de alrededor de 12°C. Caso contrario, si el agua en el interior del grifo se congela, puede dañar el mecanismo interno y/o externo del mismo.

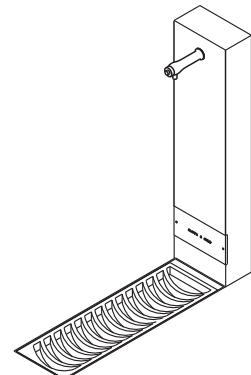

To the forecast of LOW TEMPERATURES (under 0°C), it is advised to cut the water supply and purge the pipes, remove the faucet from the fountain and store it at room temperature (about 12 ° C). Otherwise, if the water inside freezes, can damage the internal or external mechanism of the faucet.
